Footnotes

For the calculations of the equivalence sums, the respective acid forms were multiplied by the factor of 0.877 and 0.878, respectively, to infer the equivalent amount of the neutral forms.

Method of Analysis: HPLC-DAD (High Performance Liquid Chromatography - Diode Array Detector). All measurement methods were calibrated and controlled with certified reference materials (CRM). The measurements with HPLC were carried out strictly according to the USA certified method of the HPLC manufacturer.

^{*)} The determined measurement uncertainty (M.U.) is always given in the same unit as the specified result.

^{**)} ND = Not Detected. the measured value was below the detection limit of 0,01 % respectively 100 mg/kg.
